hello at\out\build\x64-Debug\CMakeFiles\cmake.check cache

Resumo: # This file is generated by cmake for dependency checking of the CMakeCache.txt file

This file is generated by cmake for dependency checking of the CMakeCache.txt file

Araquivo: hello atlout\build\x64-Debug\VSInheritEnvironments.txt

Resumo: msvc_x64_x64

msvc_x64_x64

Arquivo: listar_caminhos.ps1

Resumo: # Define a codificação de saída para UTF-8 para garantir o suporte a caracteres especiais. # Isso afeta como o PowerShell lida com strings em geral e a saída para o console. \$OutputEncoding = [System.Text.Encoding]::UTF8 [Console]::OutputEncoding = [System.Text.Encoding]::UTF8 # Define o código...

Define a codificação de saída para UTF-8 para garantir o suporte a caracteres especiais.

Isso afeta como o PowerShell lida com strings em geral e a saída para o console.

\$OutputEncoding = [System.Text.Encoding]::UTF8

[Console]::OutputEncoding = [System.Text.Encoding]::UTF8

Define o código da página do console para UTF-8. Isso é crucial para que o terminal

exiba e processe caracteres especiais corretamente.

chcp 65001 > \$null # Redireciona a saída de 'chcp' para null para não poluir o console.

Define o nome do arquivo de saída. Este arquivo será criado na mesma pasta onde o script for executado.

\$OutputFile = "caminhos_dos_arquivos.txt"

Obtém o caminho da pasta atual onde o script está sendo executado.

Isso garante que o script sempre opere na localização correta.

\$CurrentLocation = Get-Location

Exibe uma mensagem informando o usuário sobre o processo.

Write-Host "Iniciando a varredura em: \$(\$CurrentLocation.Path)"

Write-Host "Os caminhos dos arquivos serão salvos em: \$(\$CurrentLocation.Path)\\$OutputFile"

try {

Lista todos os arquivos recursivamente e extrai seus caminhos completos.

O parâmetro -Force é adicionado para incluir arquivos ocultos e de sistema,

garantindo que todos os arquivos sejam capturados.

\$FilePaths = Get-ChildItem -Path \$CurrentLocation.Path -Recurse -File -Force | Select-Object -ExpandP

Usa Set-Content para escrever os caminhos dos arquivos no arquivo de saída.

Set-Content é uma alternativa a Out-File e pode ter um comportamento de codificação

mais consistente em alguns cenários, especialmente com UTF-8.

-Encoding UTF8: Garante que o arquivo seja salvo com codificação UTF-8 para evitar problemas com ca

\$FilePaths | Set-Content -Path \$OutputFile -Encoding UTF8

```
# Exibe uma mensagem de conclusão.

Write-Host "Processo concluído! O arquivo '$OutputFile' foi criado com sucesso."
}

catch {

    Write-Error "Ocorreu um erro durante a execução do script: $($_.Exception.Message)"

    Write-Host "Verifique as permissões de acesso à pasta ou se o caminho contém caracteres inválidos."
}
